

Brother ScanNCut Blooming Flower Popup Card Tutorial

How many times have you been looking for a pretty card for that special friend or family member and just can't seem to find the right one? Well we have a number of card and envelope templates available in our store that are sure to help you out.

But here is one that is sure to get that WOW response and we have provided a free tutorial to show you how to create it using ScanNCut Canvas.

There are a lot of videos on YouTube on how to make these types of cards, but we have gone one step further and converted the pattern to Brother ScanNCut cutting files. After all why fiddle around cutting out bits of paper with scissors when you have your ScanNcut to do it for you. And we all know it does a fantastic job of cutting out your shapes, neatly and cleanly.

Watch the video tutorial below or scroll down for the written instructions

This video shows you how to create the template .fcm file for the Blooming flower card in ScanNCut Canvas.

Products used in this tutorial:

- Metallic Markers
- Zig Two Way Glue Pen

How to assemble the card

Flower Pop Up SVG file: [DOWNLOAD](#) (right-click to download)

Once you have folded the petals as shown in the video, do the following:

- Place the glue on each piece as shown by the dots in the images below. Place the glue on the tips of the petals, not the entire petal.
