

Brother ScanNCut Tutorial – Creating Scoring Lines Using ScanNCut Canvas

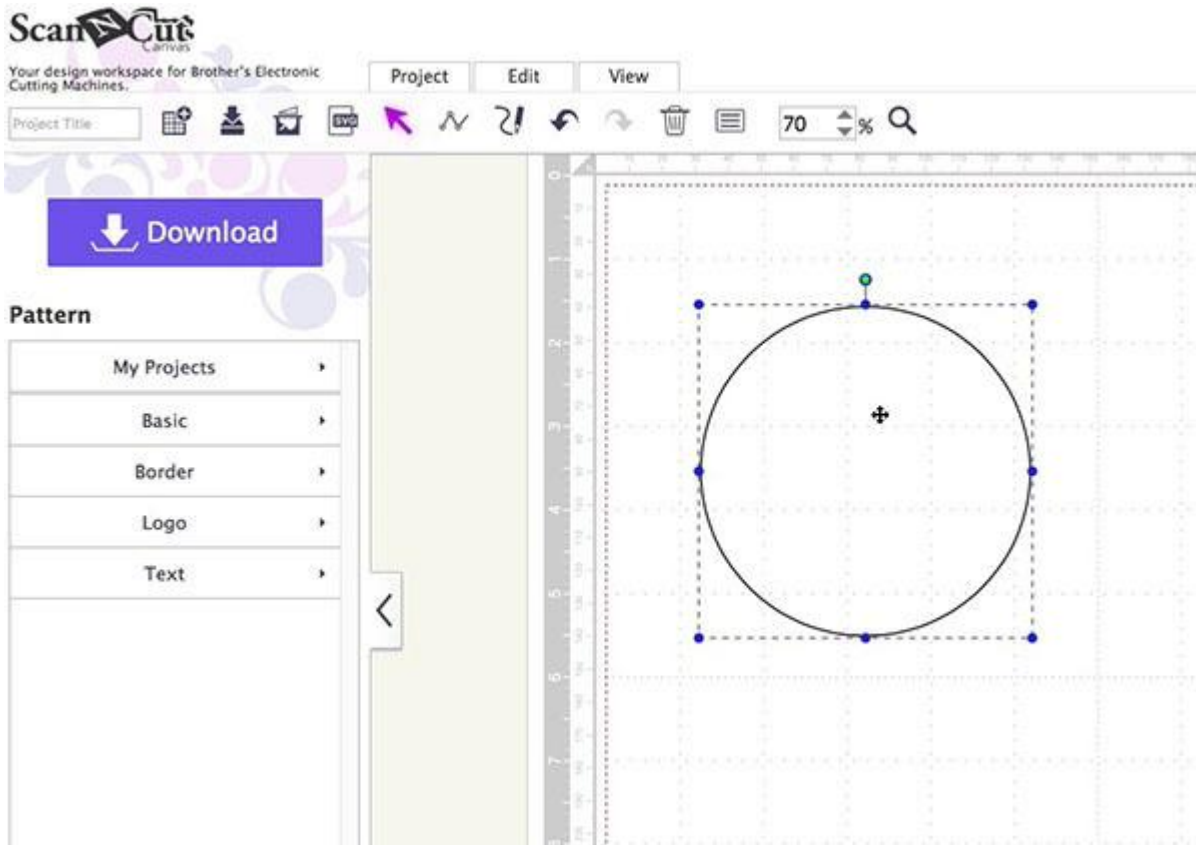

Yes, you can create scoring lines with the Brother ScanNCut...yay! However, you can't do it on the machine itself. It has to be done in ScanNCut Canvas which is the free online software that Brother provides for all ScanNCut users.

You can access ScanNCut Canvas [here](#).

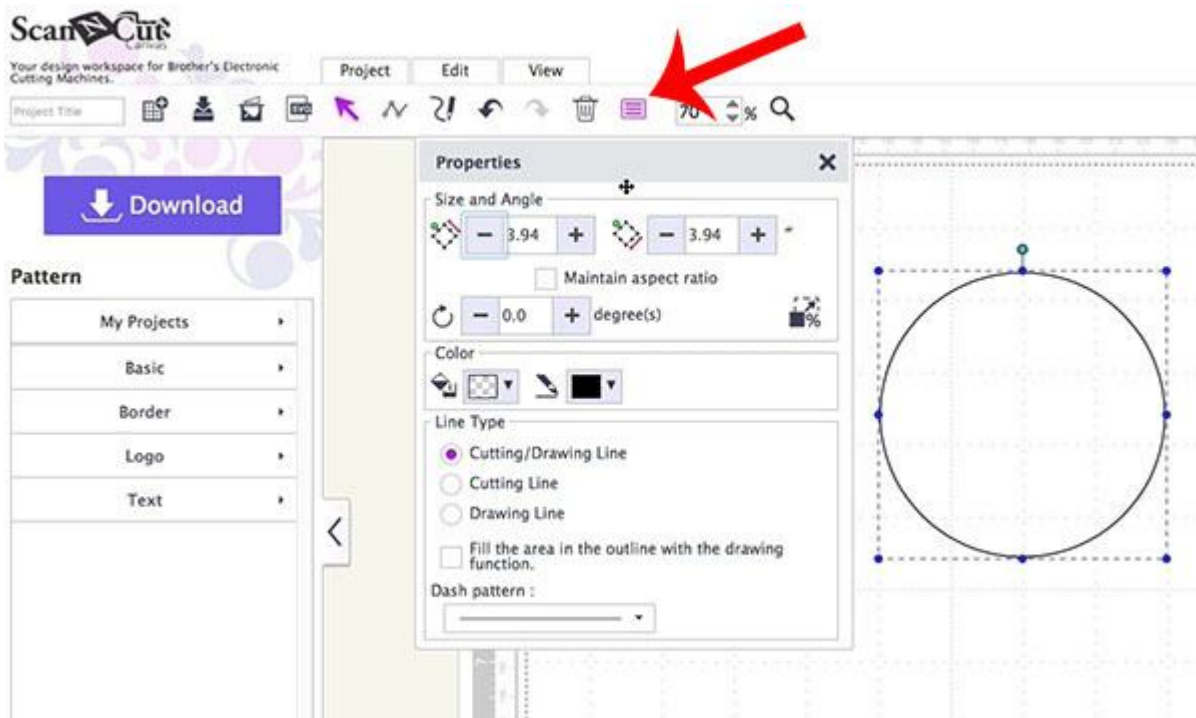

In this tutorial, we show you how to create a greeting card template and include a scoring line so that you can fold the card in half.

Watch the video above for the full tutorial but here are the basics for using the Dashed Pattern option to create scoring lines.

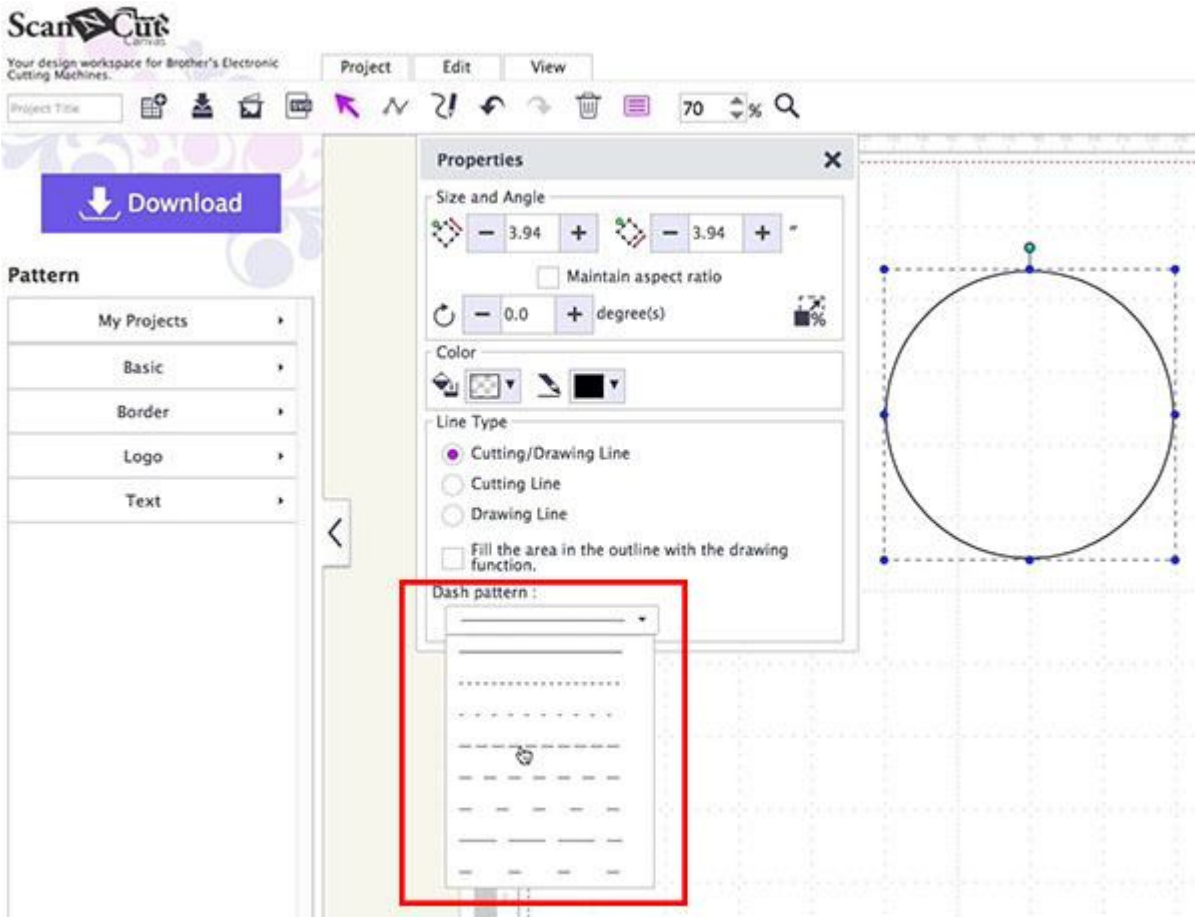

1. Add a shape to the screen and ensure that it is selected.

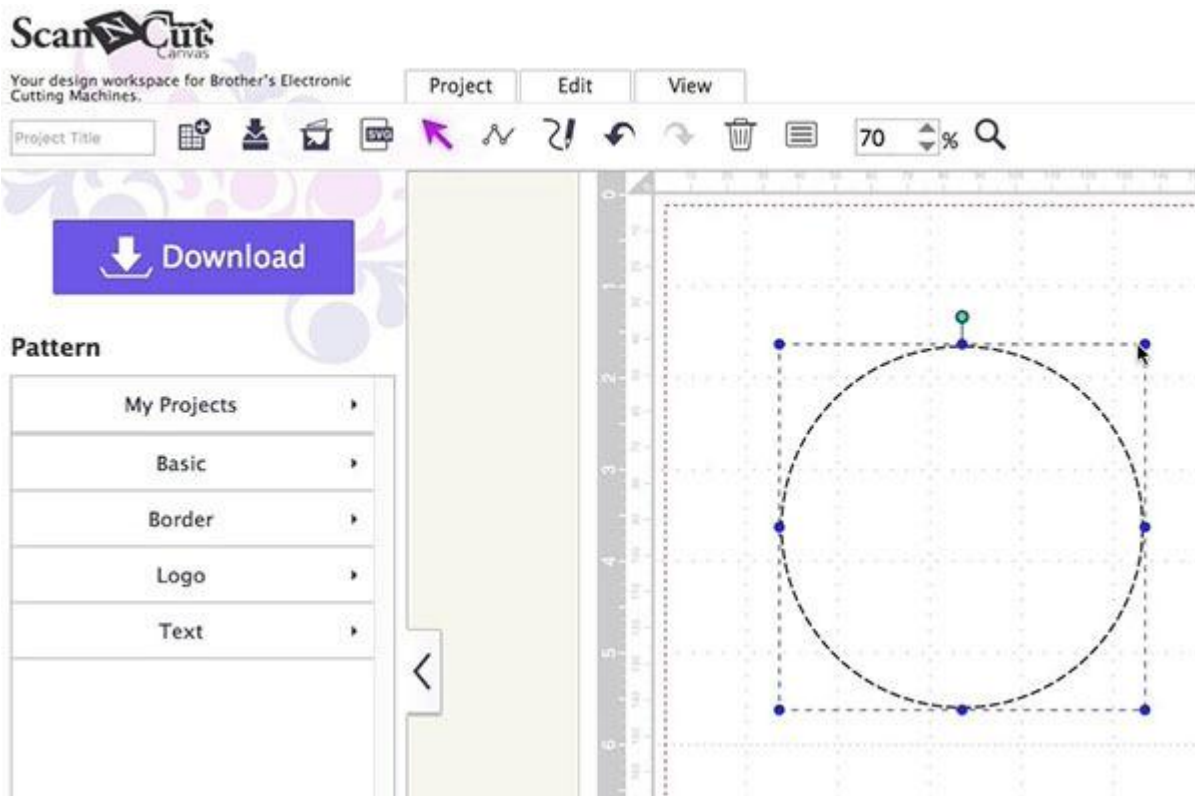

2. Select the 'Properties' option from the top menu. A pop-up will appear.

3. Click the drop-down box under 'Dash pattern' and select a dashed line from the options.

4. Your pattern will now have a dashed line around it.
